SOFT SKILLS

- **Collaborative UI-minded programmer:** Partner with designers, artists, programmers, and QA to turn gameplay requirements into readable, player-facing UI. Supported interactive menus, settings screens, and tutorial flows on a 43-member Unreal Engine production team.
- **Clear technical communicator:** Document systems so teammates can understand, maintain, and safely iterate on UI and Blueprint logic. Authored technical documentation for Blueprint systems to improve onboarding and maintainability.
- **Proactive production teammate:** Break down tasks, communicate blockers early, and keep work aligned with milestones using Jira, Miro, Perforce, and GitHub.
- **Player experience focused:** Build systems with attention to usability, input flow, visual feedback, progression clarity, and player readability.
- **Adaptable and feedback-driven:** Quickly learn new engines, workflows, and tools across Unreal Engine, Unity, Java multiplayer systems, and custom C++ engine development.

EXPERIENCE

HamsterBallin' - TGP II

January - May 2026

Unreal Engine 5.7.1 - 5.7.4, Blueprint, Common UI, UMG, Perforce (P4V), Miro Board, Jira

User Interface (UI) Programmer

- Programmed and maintained **interactive UI systems** in Unreal Engine using Blueprint, Common UI, and UMG, supporting **graphics settings, localization/language options**, pause flow, tutorial screens, and **usability-focused player preferences**.
- Created and implemented a **reusable Blueprint settings system** shared across the main menu and pause menu, **reducing duplicated UI logic** while keeping graphics, language, and usability options consistent across player-facing UI flows.
- Collaborated with designers, artists, programmers, QA, and production on a 43-member development team to gather **UI requirements**, clarify edge cases, resolve implementation issues, and deliver features aligned with milestone goals.
- Built and iterated on tutorial and menu UI with **attention to input flow, visual hierarchy, readability, player feedback**, and **accessibility-minded usability**.
- Authored technical documentation for Blueprint UI systems, improving team understanding, maintainability, onboarding, and future iteration.
- Used Jira, Miro, and Perforce workflows to track UI tasks, estimate implementation scope, manage integration needs, and support cross-discipline development.

ArachNOT - TGP I

October - December 2025

Unity, C#, Visual Studio 2022, Perforce (P4V)

Gameplay + UX Programmer

- Collaborated on a **4-person team** to develop a **2D pixel-art puzzle platformer** over a 3-month production cycle, contributing to gameplay systems, polish, and iteration.
- Designed and implemented the **player character controller**, integrating physics-based movement, collision handling, animation state transitions, and responsive player input.
- Authored core gameplay systems including **interactable crates, moving platforms, pressure-pad-driven gates**, and **screen fade transitions** to support puzzle flow, level progression, and player feedback.
- Implemented gameplay-facing transitions and state changes with attention to **timing, clarity**, and **user experience**.

Government Employee - Internal Revenue Service

February 2024 – June 2025

General Clerk + Streamline Assistant Lead

- Operated within the Receipt and Control Operations (RCO) and Document Retention Unit (DRU), assisting cross-functional teams such as the Image Control Team (ICT) and Batching Operations to **meet stringent remit and non-remit processing deadlines**.
- RCO: Managed the initial processing of incoming mail, accurately sorting and routing documents for further handling. Trained new employees on **efficient mail streamlining procedures** and document classification protocols.
- DRU: Provided **critical support during staffing shortages** to meet the 2024 tax season deadline. Organized, stored, and prepared finalized documents for palletizing and shipment, maintaining workflow continuity.
- Took initiative during downtime to assist coworkers with IT troubleshooting (emails, web navigation) and **updated job aids** to **improve onboarding** and **training processes**.

PROJECTS

In-Engine Debugging & Geometry Tools

C++, Custom Game Engine, Visual Studio 2022, Perforce

- Designed and implemented an **extensible in-engine visual debugging framework** for testing 2D geometry algorithms, including nearest-point queries, convex polygon checks, and raycast intersection cases.
- Built **interactive visualization tools** that allowed users to manipulate geometry in real time, inspect numeric results, validate edge cases, and debug algorithm behavior through **clear visual feedback**.
- Developed **reusable rendering and UI-support systems** including sprite sheet parsing, sprite animation playback, bitmap font text layout, shrink-to-fit text behavior, overrun handling, and tile-based heatmap generation.
- Applied engine-level architecture principles to create maintainable, data-driven systems intended to support future math, physics, UI, pathfinding, and content-creation workflows.
- Built **editor-style debugging interfaces** for inspecting geometry, manipulating test cases, viewing numeric results, and validating algorithm behavior through **real-time visual feedback**.

QuantumParkour — Minecraft Server Plugin

Java, Gradle, Bukkit/Paper API, SQL, GitHub Actions

- Developed a server-side Minecraft Java plugin supporting parkour level creation, checkpoint progression, block-triggered events, player stats, configuration files, debugging tools, and database-backed persistence.
- Used Gradle to **manage project builds, dependencies, plugin packaging, and versioned JAR output for server deployment**.
- Added a **GitHub Actions build pipeline** to compile the plugin, **run validation/tests**, and **publish build artifacts for repeatable deployment**.
- Documented installation, configuration, database setup, commands, troubleshooting steps, and contribution workflow to **support server operators and future maintainers**.

VOLUNTEERING

Renatus Network - Project Momentum

July 2023 - June 2026

Java, Gradle, SQL, GitHub, Miro Board, Minecraft 1.8.9 - 26.2

Quality Assurance (QA) Tester & Level Design Contributor

- **Tripled the playerbase count** within the **first 36 hours of release**.
- Provided **QA testing** and gameplay feedback across multiple parkour gamemodes, supporting both backend systems and **frontend user experience** for a multiplayer gaming network.
- Backend: Helped balance the in-game Black Market system by applying exclusive perks for guilds, cosmetics, and players. Tested and tuned **ELO rating mechanics** for competitive duel modes involving timed racing challenges.
- Frontend: Designed and tested parkour-based progression maps spanning 14 levels, ensuring each jump introduced new mechanics and maintained difficulty balance; helped with **visual theming, critical paths**, and environmental decoration to enhance **player immersion and flow**.
- Evaluated player-facing systems for **readability, progression clarity, difficulty communication, and overall gameplay feel**.
- Utilized **GitHub** for version control and issue tracking, and **Miro boards** to manage level design tasks and project sprints.

EDUCATION

Graduate Student - Southern Methodist University (SMU) GuildHall

Class of 2027

- Seeking Masters Degree in Interactive Technology - Software Development

Undergraduate Alumni - The University of Texas at Dallas

August 2019 - May 2023

- Bachelors in Science - Computer Science

TECHNICAL SKILLS

- **Programming:** C#, C++, Java, Python, SQL
- **Game/UI:** Unreal Engine, Unity, UMG, Common UI, Blueprint, UI programming, gameplay tools, visual debugging tools
- **Tools/UI Concepts:** WPF, MVVM, Windows desktop applications, reusable UI controls, UI/UX principles, documentation
- **Version Control / Production:** Perforce, Git, GitHub, Jira, Miro, Agile
- **Databases:** SQLite, MySQL, PostgreSQL, Microsoft SQL Server
- **Development:** Visual Studio 2022, VS Code, IntelliJ, PyCharm
